

CSS Practice Worksheet – From Basics to Flexbox Mastery

This worksheet helps you practice CSS core concepts including selectors, styling, box model, display, and flexbox through hands-on coding challenges.

Q1. Style Your First Paragraph

Concepts: Element selector, Color, Font-size, Text alignment

Create a web page with one paragraph and apply styles using element selector. - Font color: blue - Font size: 20px - Text alignment: center Expected Output: A centered blue paragraph.

```
<p>Welcome to the world of CSS!</p>
```

■ Write your observations and final CSS code below:

Q2. Add Class and ID Selectors

Concepts: Class, ID, Priority

Create three <p> tags. Use a class (.highlight) and an ID (#special). Observe which has higher priority.

```
<p id='special' class='highlight'>CSS Priority Test</p>
```

■ Write your observations and final CSS code below:

Q4. Create a Product Card

Concepts: Margin, Padding, Border, Width, Height

Design a simple card layout using padding, margin, border, and width.

```
<div class='product'>
  <h3>Product Name</h3>
  <p>Price: $25</p>
</div>
```

■ Write your observations and final CSS code below:

Q6. Inline vs Block Demo

Concepts: display property

Create paragraph and span elements and experiment with display: block and display: inline.

```
<p>This is a paragraph.</p>  
<span>This is a span.</span>
```

■ Write your observations and final CSS code below:

Q8. Floating Image Layout

Concepts: float, clear

Float an image left and wrap text around it. Use clear: both for the next paragraph.

```
<img src='image.jpg' alt='Example' />
<p>Text wrapping around image...</p>
```

■ Write your observations and final CSS code below:

Q9. Center Content with Flexbox

Concepts: `display: flex`, `justify-content`, `align-items`

Center text both horizontally and vertically using Flexbox.

```
<div class='container'>  
  <p>Centered with Flexbox!</p>  
</div>
```

■ Write your observations and final CSS code below:

Q12. Mini Project – Responsive Flex Layout

Concepts: Flexbox, justify-content, align-items, flex-wrap

Create a responsive photo gallery using Flexbox with wrapping behavior.

```
<div class='gallery'>
  <img src='photo1.jpg'>
  <img src='photo2.jpg'>
  ...
</div>
```

■ Write your observations and final CSS code below:
